Sentry-go
Quick File & Print Monitor *v6*

Monitor files & directories
Updates, deletes & file access
Check status of local printers & jobs
Monitor print queues

… alerts & web reporting as standard!

Key features

Monitor folders & sub-folders

Monitor & track user access to sensitive resources

Check printer status

Monitor print queues & submitted print jobs

Monitor the print spooler service

Monitor the health of your server, incl. Performance, services, logs & available disk space

Respond automatically to detected errors

Real-time alerts & notifications

Web reporting built-in

Compatible with Sentry-go Plus! components

Combined monitoring for printing & file system!

Windows servers today have many roles, such as Active Directory servers, database & web servers. Two others allow for printing and the storage of files and for SMEs in particular, these roles are typically combined. To cater for servers such as these, the Sentry-go Quick File & Print Monitor provides an easy to use, single point solution which can help keep track of both file access & file system changes as well as print queues and local printers.

For files, you can monitor all aspects of your file system, from entire folders & sub-folders to specific file types, or named files, either locally or via remotely shares.

When monitoring locally, user access to files & folders can also be tracked to determine who has viewed or made changes to more sensitive data.

With this Quick Monitor, the status of local printers and associated print queues are also monitored, along with the health of the print spooler itself. Alongside this, print jobs themselves can be monitored in terms of size and no. pages.
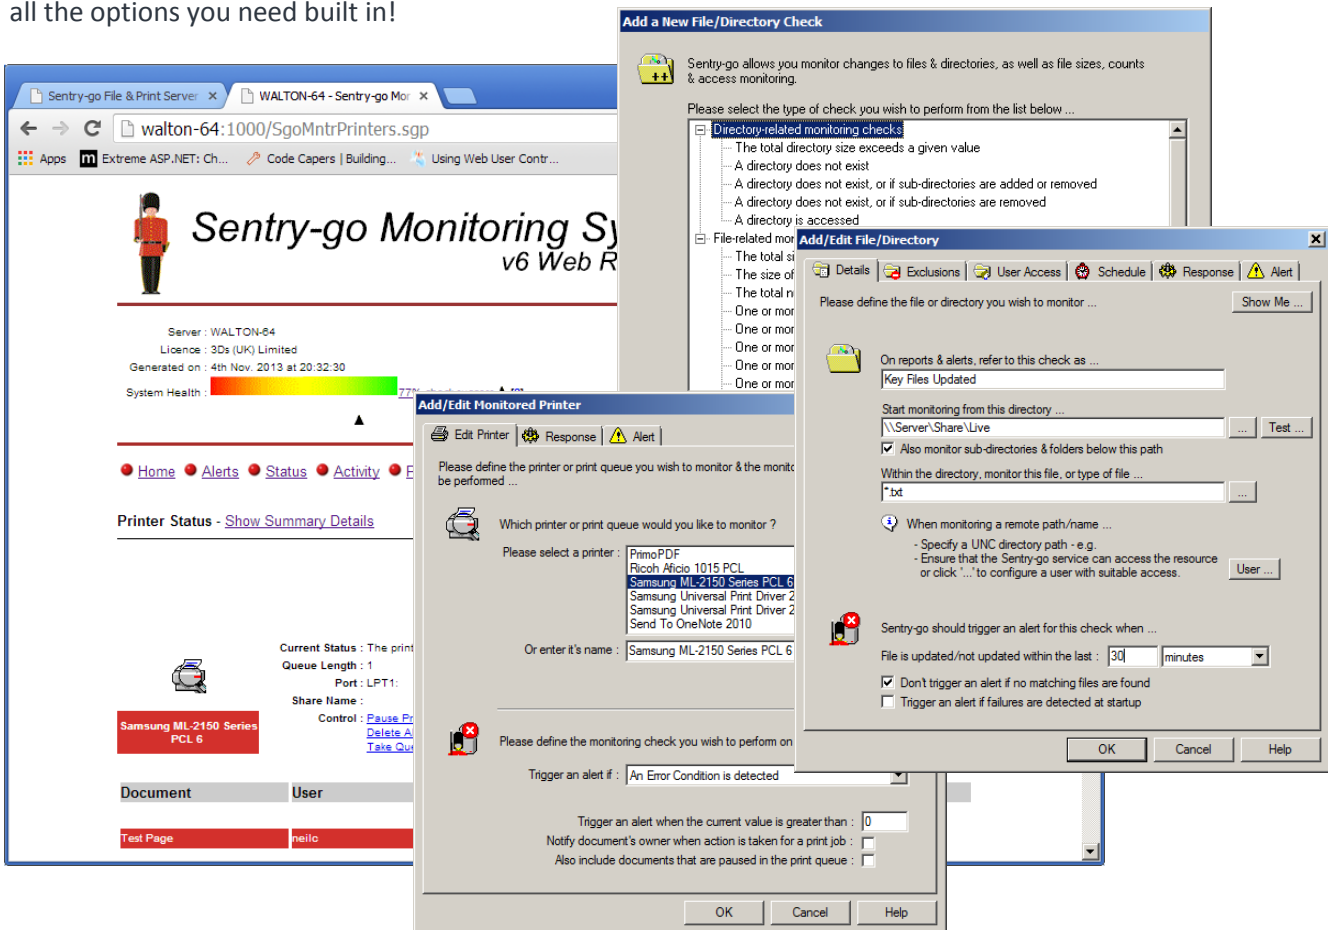

If errors are written log files or the event log, Sentry-go can let you know within a few seconds. Disk space available to the print spooler can also be monitored to ensure sufficient space is maintained.

When errors are detected, the monitor can respond automatically – e.g. to restart the spooler or delete print jobs that are too large etc., or you can be notified immediately using a number of alerting methods such as e-mail & SMS. Real-time information is available through desktop tools or via your web browser. Add the Enterprise Option to keep track of all your Sentry-go monitors from single reports.
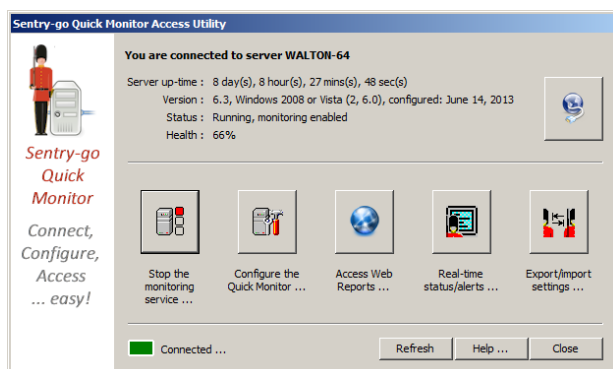

Try Sentry-go for yourself, free for 21 days. Visit http://www.sentry-go.com/evaluations.aspx, or contact us for more information.

File & printer monitoring and more …

Behind the file & print systems is a Window server which also needs monitoring to ensure correct operation. Using this Quick Monitor, these aspects of the server can also be checked quickly & easily. Whether it's server or software performance, messages written to the Event Logs or the disk space available, you'll find all the options you need built in!

Quick & easy to use

With the Quick Monitor's client tools, controlling, configuring and accessing the monitor is easy & intuitive, either locally or remotely from your desktop.

Alerts allow you to be notified of any detected issues quickly and in a way convenient to you, while the built-in web server gives you direct access to the monitoring engine from your web browser.
